Spiro's book is a fascinating and timely account of the growing influence of super rich owners in football. It is a must-read for anyone who wants to understand the forces that are shaping the modern game.

The Rise of the Super Rich Owners

The first super rich owner in football was Roman Abramovich, who bought Chelsea in 2003. Abramovich is a Russian oligarch who made his fortune in the oil industry. He has since invested heavily in Chelsea, transforming the club into one of the most successful in Europe.

Abramovich's success has inspired other super rich individuals to invest in football. In recent years, we have seen the likes of Sheikh Mansour (Manchester City), Nasser Al-Khelaifi (Paris Saint-Germain), and Stan Kroenke (Arsenal) all take control of major clubs.

These super rich owners have brought with them a new level of spending to football. They have invested heavily in players, managers, and infrastructure. This has led to a significant increase in the quality of the game, but it has also raised concerns about the sustainability of the sport.

The Impact of Super Rich Owners

The impact of super rich owners on football has been profound. They have brought with them a new level of professionalism and ambition to the game. They have also helped to raise the profile of football around the world.

However, the rise of super rich owners has also had some negative consequences. The spending spree that they have embarked on has led to a widening gap between the rich and poor clubs. This has made it more difficult for smaller clubs to compete, and it has also led to a decline in the competitive balance of the game.

In addition, the tactics that some super rich owners have employed have been controversial. Some have been accused of using their wealth to

manipulate the game in their favor. This has led to calls for greater regulation of the sport.

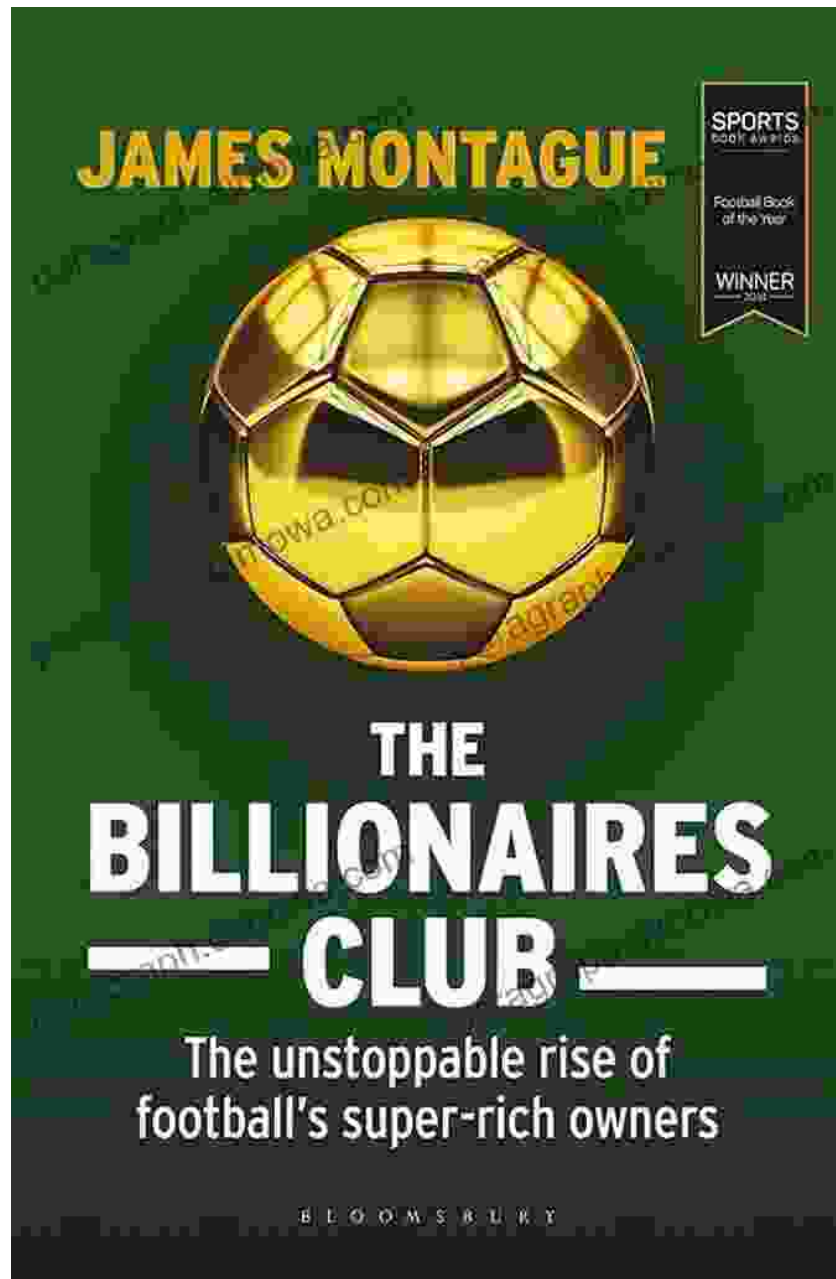

The Future of Football

The future of football is uncertain. It is clear that super rich owners will continue to play a major role in the game, but it is unclear how their influence will evolve.

Some believe that the rise of super rich owners is a positive development for football. They argue that it has led to increased investment and innovation, which has benefited the game as a whole.

Others believe that the rise of super rich owners is a threat to the future of football. They argue that it has led to a widening gap between the rich and poor clubs, and that it has undermined the competitive balance of the game.

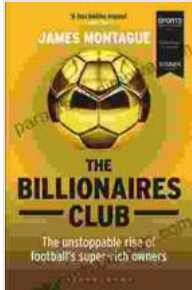

Only time will tell what the future holds for football. However, one thing is for sure: the rise of super rich owners has changed the game forever.
